TITLE : MOTOR-DRIVEN PUMP

ABSTRACT : PURPOSE: To provide a motor-driven pump allowing a motor and in its turn the whole pump to be made compact in the axial direction of the output shaft of the motor and also enabling the improvement of assembling work performance.

CONSTITUTION: The pump housing 44 of a motor-driven pump 10 is divided into a first pump housing 40 and a second pump housing 42. The first pump housing 40 is provided with wiring combined plates 66, 68 embedded therein by insertion-molding, and also a support bearing 38, a brush 76, and the like mounted thereto. Parts are not therefore disposed on the bottom face side of the yoke 16 of a rotor 26, so that a motor and in its turn the whole pump can be made axially compact.
